ETAILED ACTION

Election/Restrictions

Applicant's election of **Species I (Figures 1A-2), Subspecies A1 (Single Swivel Joint), Subspecies B1 (Through-Bore in Joint), and Subspecies B1-1 (Threaded)** in the reply filed on January 29th, 2007 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Applicant alleged that claims 2-7, 13-16, 20, 30 and 31 are readable upon the elected species. The examiner disagrees in regard to claims 30 and 31 that are directed to a vertebral endplate and not the elected bone plate of **Figures 1A-2**.

Claims 8-12, 17-19, 21-36 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on January 29th, 2007.

Information Disclosure Statement

The Information Disclosure Statement filed on July 26th, 2004 was not considered because it merely included all references previously disclosed in the Information Disclosure Statement filed on December 16th, 2003.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct

Art Unit: 3733

from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 2-7, 13-16 and 20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,663,632. Although the conflicting claims are not identical, they are not patentably distinct from each other because the difference between the patented claims and the claims of the application lies in the fact that the patented claims recite more elements and are thus more specific. The patented claims are in effect a "species" of the "generic invention" as claimed in the current application. It has been held that the generic invention is "anticipated" by the "species." See *In re Goodman*, 29 USPQ2d 2010 (Fed. Cir. 1993).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3733

Claims 2-7, 13-16 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by von Bezold et al (US Patent 4,029,091).

von Bezold et al disclose an implant (**Figures 1-6**) comprising: at least one coupler (**14**) with two connecting elements (**18a and 18b**); the connecting elements allow a screw to rotate with respect to the implant (the bone plate **10'**); the connecting elements extend from an outer perimeter of the coupler roughly 180 degrees apart; the plate and coupler both have a hole (**12**) for receiving the bone screw; and the bone plate has a thickness larger than a thickness of a coupler (see **Figure 3**, a portion of **14** is tapered and thus has a thickness less than the plate **10'**).
